- a) Content Requirements*
- b) Datafeed Requirements*
- c) Shopping Cart Software for Datafeeds*
- d) Web Crawler*

2) Categorisation of your products

3) Logo

Introduction

The product feed contains the content from your web site's product pages.

The first line of the file should be the header, using the field names defined below; each subsequent line should provide the data for a single product.

Please read the information below carefully as it will assist you with creating a feed that will optimize your results.

1) Submitting your datafeed

a) Content Requirements

By providing all the relevant fields your content becomes more comprehensive and useful to shoppers. If you display all the correct information about your products then your sales will increase, because all clicks will be potential sales - not just browsers needing further information about your products.

Datafeeds must be submitted with all the information that is outlined in the table below:

Field Name	Field Description	Requirement
Code	Unique identifier for each product - e.g., your internal product ID or Manufacturer ID. You must use the same code in subsequent feeds for each product.	Required
Name	The full name of your product including Brand, Model Number, Product Type. EG Nikon D90 Digital Camera. Please use standard text, not capital letters.	Required
Description	Detailed product description. Character limit of 255.	Required
Category	Category as found on page: http://www.myshopping.com.au/IX--site_index Separate the different levels with a ">".	Required
Price	Must be in Australian dollars including GST (if applicable) No Dollar Signs, dollar value only inclusive of decimal points.	Required
Product_URL	URL of the product web page. You must be able to purchase the product directly from said page. Must provide full URL including http://	Required
Image_URL	The URL that links to your product image. You must include http:// in URLs provided.	Highly Recommended
Brand	Product Brand EG Sony or Generic for unknown brand.	Required
Shipping	Cost of shipping in dollar value only , no dollar signs. Please note using '0' and '0.0' denotes "Free Shipping" on myshopping.com.au. Leave blank if shipping cost is variable, and consider adding to description.	Recommended
InStock	Use 'Y', 'In Stock' or 'N'. The system cannot decipher numerals in this field . To advise customers if products are in stock prior to clicking.	Recommended

Optional Fields and Corresponding Categories

Field Name	Field Description	Category
size	Size of product – must be added for Fragrance products to enable categorisation	Fragrance, Clothing, Skincare
author	Aurthor's name	Books

vintages	Defines the wine vintage.	Wine
age	The age group for which the product is intended.	Games, Toys, Baby Gear
gold_carats	Product Gold Karats.	Jewellery
carats	Recommended for diamonds.	Jewellery
platform	Examples: Playstation 2, Xbox, Nintendo, etc	Video Games

To get the most out of myshopping.com.au, please ensure your product name and description have relevant keywords that you think your customers will be using while searching. This will give you greater results when customers are using the 'Search' function on our website.

Mapping of your products on our site is now automatic for the majority of categories. This means that if your product names and/or descriptions include excellent relevant keywords, they will be indexed and appear within our left-hand side filters on the same day!

Please ensure Model numbers are included in the product name, or at least provided in its own field. The bulk of automatic classification is done utilizing this code, so if not included products will not be classified on the 2nd level.

If products do not have relevant keywords or comprehensive descriptions, the automatic filter will not be able to display your products. If you are unsure as to what keywords to use for your products, please just email us or check our website to see what keywords are being used to display your product categories.

b) Datafeed Requirements

We accept the following file types:

- CSV and TXT (file by email of live link).
- RSS and XML files. (link)

Product Feed Examples:

Below are two sample feed, and serves only as a guideline.

CSV File

<http://myshopping.com.au/ProductFeedExample.csv>

The easiest way to commence is to use the sample file as a template- instructions for using the CSV file are as follows:

1. Save the file to your computer, then open it. (as done with file in above link)
Note: If file does not automatically open with Excel, please follow step 2, otherwise go to step 3.
2. Right click on the file - Open with - Excel - ok
3. Leave the headings as they are - delete all sample information
4. Copy and paste the relevant information from your site into each column/field
5. Once the file is ready - File - Save As - companynameddmm eg myshopping0111
6. This can then be put on a server for us to pick up, or emailed to us.

XML File

For those wishing to provide us with an XML file, a sample can be found at the below link:

<http://myshopping.com.au/XMLFeedExample.txt>

Please note:

- If you are providing a live link then the file name should remain the same.
- If you have an automatically generated feed without column headings we can accommodate this.
- We can also normally set-up feeds used for other comparison sites.

- For future feeds please make sure you include all products you wish to have displayed on myshopping.com.au. Once a product is not on a feed it will not appear online.

c) Shopping Cart Software for Datafeeds

If you are unsure on how to create your feed, please forward our specifications to your shopping cart provider. Carts such as Ashop, EziMerchant and Gate 13 will be able to give you instructions on how to download your feed from your cart, as these providers have ready built reports for shopping comparison sites. Most shopping carts should be able to assist you in creating a usable feed as per our requirements.

We also provide further information regarding Oscommerce, Zencart and Virtuemart feeds once registration is complete.

d) Web Crawler

If you do not have the resources to create and maintain your product feed, MyShopping.com.au will create a web crawler that will visit your site regularly and automatically create your feed. There is an initial setup fee of \$95.00 plus GST. If you wish to choose this option details will be provided upon registration.

2) Categorisation of your products

A list of current categories used by myshopping.com.au can be found on the below link:

http://www.myshopping.com.au/IX--site_index

The main category is highlighted in blue, the sub categories are the links under these headings. Please where possible use the subcategories as this links to the automatic filters.

There are 2 levels of categorisation within MyShopping.

- First Level: is the basic top level categorisation e.g. Digital Cameras. These will be ready and have you online within 24 hours of registration provided the categories are usable. All automated categories will be finished at this level of categorisation if you have included good keywords and descriptions in your products.

Please note: for datafeeds without categories or non-specific categories we cannot guarantee your products will be online within 24 hours.

- Second Level: is more in-depth, and applies filters to each product, to link your products to the relevant sub-categories. This is a manual process and can take a few weeks to complete. All automated products with relevant keywords and MPN's can be completed the same day.

3) Logo

If you have selected the Super Plan (Any budget) or Monthly Plan (\$300 budget) you are eligible for a free logo on our website. Default dimensions on the site are 114 x 25 pixels.

Once registered you can provide this with your datafeed, or an image from your site can be used.
